

Galaxy Warriors

Lite Paper Version 1.0.1
April 11, 2022

Summary

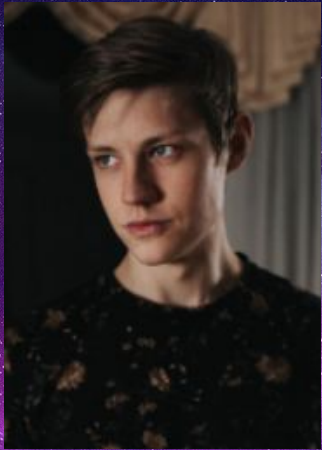

Galaxy Warriors is a game that uses NFT's on the Binance Smart Chain. The premise of the game is to lead a group of warriors into battle to earn fame and fortune. Warriors and weapons will be purchased with BNB or Sheesh. If purchased with Sheesh, the player will receive a discount!**

Every victorious battle will earn the winner in-game tokens. The mechanic of keeping the in-game play off the main-net will reduce fees and increase the ability for players to maximize their earning potential. As your warriors win battles, they will gain experience and levels. Increased levels will result in your warriors earning more in-game tokens.

Our mission is to make Galaxy Warriors the best NFT game in the world with the strongest economy, and we believe our foundation will allow this to happen!

Purpose of this Paper

The NFT gaming space has exploded over the last year, and this has resulted in many bad actors creating “games” that were nothing more than a front for a rug pull. There have also been many legitimate games whose team did not take into consideration the longevity of the game which resulted in a rise and fall in under a month’s time.

We hope by reading this lite paper that you can see more clearly the legitimacy of our project. We have a great team whose mission is to deliver the best. If anyone reading this has any questions, please message in the #support section on Discord. If it is very urgent, feel free to simply reach out to King Beans to have any questions answered!

Gameplay

As stated in the summary, our game will include battles that are fought to gain experience and in-game tokens. Players will recruit warriors, forge weapons, and fight in the coliseum which will be released during phase one.

The biggest change in our game from most others is the game engine will be built off the main net. This allows players to fight and level up with vastly lower fees. The only fees in phase one will be recruiting characters, forging weapons, marketplace, and claiming Galaxy Warriors Tokens using your in-game tokens.

In future phases, we will introduce other mechanics which will give the player the opportunity to win ultra-rare weapons as well as another passive earning mechanics. All expansions and timelines are not set in stone, and if you have suggestions or recommendations please reach out to the team!

Barracks

Players will begin the game by recruiting their first character.

Characters will be able to be recruited with either BNB or Sheesh. If you elect to purchase in Sheesh, we will offer you a discounted price**.

The price of warriors will not be set as a singular value. The team will be using an oracle to tie the value of the character to the value of Sheesh versus BUSD.

For example, if a character costs 100 BUSD, then it will cost 100 BUSD worth of BNB or 90 BUSD worth of Sheesh (discount not set yet).

By using an oracle to lock the price of a character to BUSD, we can ensure a great, long-lasting economy for the game!

**Limited time

Armory

Once a character has been recruited, a player can forge their first weapon. We have learned from other games the average account carries only one weapon to their four characters. Using this knowledge, the cost of a weapon will be priced higher than a character to fight against people gaming the system. Each weapon will also have a rank that will give higher rewards and be rarer as the rank goes up.

Like warriors, weapons will be able to be forged with either BNB or Sheesh. If you elect to purchase in Sheesh, we will offer you a discounted price**. The price of weapons will not be set as a singular value. The team will be using an oracle to tie the value of the weapon to the value of Sheesh versus BUSD.

For example, if a weapon costs 100 BUSD, then it will cost 100 BUSD worth of BNB or 90 BUSD worth of Sheesh (discount not set yet).

By using an oracle to lock the price of a weapon to BUSD, we can ensure a great, long-lasting economy for the game!

**Limited time

Coliseum

Now that you have your character and weapon, it's time to fight!

Players will select their character and weapon they wish to fight with, and then they will elect to do battle against 1 of 4 enemies. Doing battle will cost a certain amount of stamina which is refreshed at a dynamic rate.

Whilst researching other games, we've noticed that most players always elected to fight the most likely battle. In our game, we want to incentivize players to fight any enemy, so we will be rewarding more as the fights become harder! Some players may still elect to fight the easiest enemy, but players with a higher risk tolerance will have the opportunity to get a higher reward and gain more experience.

Rewards

As stated in the summary and gameplay, our game engine will be built mainly off the main net!

This means that players will be able to fight and earn in-game tokens without paying high gas fees on every interaction.

However, the Galactic Emperor's mood is easily changed. Based on his mood, the galactic economy will fluctuate. This will leave players with the decision on when they want to withdraw their in-game tokens.

To ensure the price of GWT remains stable to continue to be rewarding for players, funds earned from the recruiting, forging, and market will go towards replenishing the reward pool of GWT!

Market

We wouldn't be an NFT game if we didn't give players the opportunity to also buy and sell their NFTs on the marketplace!

The market will dictate the price in BNB that they wish to sell their warriors for while selling their weapons for GWT. A dynamic tax will be taken from the seller's price which will go towards the Galaxy Warriors ecosystem.

Galaxy Warriors Token

Galaxy Warriors Token will be the token that players can claim using their in-game tokens. The token itself will have a sales tax to maintain a vibrant ecosystem, but players can reduce this sales tax by playing the game / holding NFT's for the game within their wallet!

Long term, we will be adding expansions within the game that will cost GWT, so players will be able to deposit their crypto 1:1 into the game as well to play mini-games or purchase other valuables. All deposits into the game will go back into the Galaxy Warriors' economy. We believe this mechanic will help keep the game healthy for years to come!

Expansions

The team is constantly thinking of new expansions to add to the game post-launch. An aspect that has led to the detriment of other games is the inability to keep generating fresh new game-players.

Without new players, these other games don't have a way to continue to fund their ROI.

Our goal is to build expansions that are fun, but we also want them to continue to benefit the health of the economy!

Roadmap

Sheesh was launched as a meme token in April 2021 but it has become much, much more than that. The core team was slowly formed over time, and we now have the mission to create unique NFT product offerings which can bring together gamers and influencers.

Our first project will be Galaxy Warriors! We know how ecstatic gamers are to play NFT games, so we want to release the best NFT game on the market! Our ideation stage consisted of multiple considerations and trimming, and we hope you will be happy with our long-term vision of the game!

With that, let's get into the phases of the roadmap!

Roadmap: Phase 1

Sheesh Creation: Sheesh was created and a team was formed around the mission to create unique NFT product offerings which can bring together gamers and influencers

Galaxy Warriors Ideation: Ideation is an ongoing process to further develop the mechanics and necessary features within the game. It began with the foundation development of the game and continues to evolve daily with an ongoing iteration of functions as well as potential additions to the future of the game

Roadmap: Phase 2

User Interface and User Experience: Once all details for the game were fleshed out, the team was able to begin developing the Galaxy Warriors user experience. If you would like to see a version of the UI that was updated in 2021, please watch below:

Desktop: <https://www.youtube.com/watch?v=OJ6StsKbrOY&t=5s>

Mobile: <https://www.youtube.com/watch?v=BtUIwVQNIde&t=5s>

Like every aspect of a project, the UI has been iterated on nonstop for the best user experience. We want our game to be seamless and easy to figure out. Again, we are always up for suggestions from our community on any way to improve upon our current model!

Launch Sheesh Version 2.0: To ensure the longevity of the game, Sheesh token was migrated to a more stable contract with higher security and a variable tax.

Game Development: With the UI and UX created, the actual development of the game can begin.

1. Design the UI of the game
2. Code the front end design using the latest web design methodologies
3. Wire up the frontend with the backend and blockchain*
4. Extensively test the app

*This is the most time-consuming portion of the roadmap

Roadmap: Phase 3

User Interface and User Experience: Once all details for the game were fleshed out, the team was able to begin developing the Galaxy Warriors user experience. If you would like to see a version of the UI that was updated in 2021, please watch below:

Desktop: <https://www.youtube.com/watch?v=OI6StsKbrOY&t=5s>

Mobile: <https://www.youtube.com/watch?v=BtUIwVONIdc&t=5s>

Like every aspect of a project, the UI has been iterated on nonstop for the best user experience. We want our game to be seamless and easy to figure out. Again, we are always up for suggestions from our community on any way to improve upon our current model!

Launch Sheesh Version 2.0: To ensure the longevity of the game, Sheesh token was migrated to a more stable contract with higher security and a variable tax.

Launch GWT: To ensure the longevity of the game, GalaxyWarriorsToken was created with a variable tax to create revenue for the team to develop the game more quickly and create a better product

Roadmap: Phase 4

Character Rebrand: Professional artists were commissioned for a full rebrand which included custom art for all future characters, weapons, and in game content.

Website Rebrand:

1. Professional artists were commissioned to create art for the new website
2. Professional website designer was commissioned to create a high quality, new look for the website which is competitive / comparable to top NFT games
3. Outside coding resources were commissioned to expedite the release of the new website
4. Website was launched on April 10, 2022

Roadmap: Phase 5

Game Development: With the UI and UX created, the actual development of the game can begin.

1. Design the UI of the game
2. Code the front end design using the latest web design methodologies
3. Wire up the frontend with the backend and blockchain*
4. Extensively test the app

*This is the most time-consuming portion of the roadmap

Launch the first iteration of Galaxy Warriors: Once all bugs have been fixed, the game is ready for launch! As stated previously, the first iteration will include only the barracks, armory, market, and coliseum

This will give players ample opportunity for play to earn, and it will also reward early players more than players who join later

Moderation: Trial in-game moderation to ensure quality gameplay for Galaxy Warriors

Roadmap: Phase 6

Expansions: The team will release expansions that will increase the enjoyment of the game as well as introduce other earning opportunities for the players. Too many NFT games have come and gone in as little as three to four days. Our mission is to create a game for the long term

Other projects: The Sheesh / Galaxy Warriors team will also continue working on other projects that will continue to fuel the entire Sheesh ecosystem to fulfill our mission: To create unique NFT products offerings which can bring the world of gamers and influencers together
